

# Tiger Mobile Bill Import

Tiger Prism enables full analysis of telecoms activity and expenditure, giving the ability to incorporate mobile activity into the system

## Product Overview

Tiger Communications is an international market leader specialising in Unified Communication and Collaboration Analytics. We have nearly 40 years' experience in delivering business intelligence and management information to global corporates, public sector organisations and SMEs.

### Information Available

All data as provided by the mobile vendor will be available for analysis within the standard Tiger report suite. This typically includes the following fields as a minimum:

Mobile Number

Date

Time

Type of activity

Number dialled

Duration

Costs as dictated by mobile vendor

Volume of data

## What is Mobile Bill Import

Our Tiger Prism reporting tool, as standard, monitors and provides analysis of all extension activity from any Unified Communications platform or traditional PBX.

To enable an organisation to fully analyse telecoms activity and expenditure, Prism can incorporate mobile activity into the system. Data can be imported and will be available to users alongside other endpoint or collaboration activity.

Prism will, in addition, provide analysis on speech, data usage (roaming and non-roaming), SMS and MMS.

Mobile numbers can be associated to departments and users as required. Reports may be generated to encompass all user activity, or a user-defined combination of mobile number(s) and or endpoints and departments as required.

### Compatibility

All mobile vendors that provide an itemised and electronic file. Data available is determined by the vendor.

### Licensing

Interfaces are purchased on a per vendor basis, with licenses based on the number of mobile numbers being monitored.
